Excerpt: . At first the ants stored all of the pupae in the crevice between incline A and stage number one. After that had been accomplished, they began carrying them to the nest. This was conducted at night, by incandescent electric light; all of the other experiments of the series were conducted by daylight. X The pupae were carried up incline C to stage number two, across stage number two to incline if, down incline B to the nest. No pupae were carried down incline A. One pupa was conveyed down incline B, all the others down incline A. One worker ascended incline B to the stage and carried a pupa down incline A.) One pupa was conveyed down incline B, the remainder down incline A. t All of the pupae were conveyed down incline B. 0 A very large majority of the pupae...
